1,200 solar energy cookers for remote areas

PANO – The Solar Serve Organisation on June 2 in coordination with the University of Danang displayed solar energy equipment such as family sized cookers, community-sized cookers (for about 50 people) and water purifying devices.

It took only 45 minutes to cook a large meal for all participants consisting of a wide variety of dishes. The cookers operated by absorbing solar energy.

More than 100 solar energy cookers were given to poor households in Ngu Hanh Son district and victims of the Chanchu typhoon in Danang city.

Since 2000, Solar Serve has presented as many as 1,200 cookers to poor households in mountainous, remote and coastal areas.

Such economical equipment not only helps inhabitants save money for fuel consumption but helps protect the environment as well.
